

Profile

Graduate Student in the Computer & Information Sciences specializing in Computer/Network Security and A.I. for Science/Education. Technical background spanning computer security, networking systems, and machine learning applications in education and science, supported by hands-on experience in Vision-Language Models (VLMs) and multi-objective AI tasks. Experienced content creator and media producer, owning large YouTube channel which heavily utilizes strong technical, creative, and communication skills.

Education

University of Michigan, Dearborn
M.S. in Computer & Information Sciences

Expected 2028

University of Michigan, Ann Arbor
B.S. in Computer Science, Minor in Music

Graduated 2026

Research

Research Project Contributor

Fall 2025

University Of Michigan
Advisor: Sindhu Kutty

- Replicated and extended Wang et al.'s paper on *Reinforcement Learning from Vision Language Foundation Model Feedback* as part of a six-member team.
 - Implemented pairwise image comparisons, enabling model to compare an additional image at every step and thus converge up to $2\times$ more efficiently.
 - Incorporated metadata, enabling the VLM to learn tasks with a secondary objective efficiently, with minimal effect to the primary objective.
 - Utilized queries to Gemini's and ChatGPT's A.I. and navigated a limited budget for tokens and cluster computing runtime.
 - Developed skills required to write and evaluate formal research papers, as well as creating both oral and poster presentations.
- Project website: <https://eecs-498-group-11.github.io/project-website/>

This work was created as part of a course funded and supported by the Electrical Engineering and Computer Science department at the University of Michigan.

Experience

Hutchinson Antivibration Systems

2023, 2024

Software Development Intern

Summer 2024

- Optimized a pricing tool for organizing prices of customer complaints by refactoring legacy code in **TypeScript**, resulting in a more stable and intuitive interface for the quality engineering team.
- Engineered a data-tracking system using SQL and networking protocols to generate and distribute real-time reports, including an automated email system that generated and distributed spreadsheets upon arrival of new data.
- Collaborated with quality engineers to implement features that improved functionality and user experience.
- Leveraged JavaScript, HTML, and SQL to enhance backend functionality and frontend usability, while gaining exposure to networking and email distribution systems.

Summer 2023

- Revamped legacy inspection workflows by replacing manual pen-and-paper processes with a robust digital interface, achieving an estimated 50% reduction in documentation time and ensuring data integrity across the manufacturing floor.
- Migrated data collection from physical binders to a real-time SQL-backed system and data visualized on monitors throughout the plant.

- Developed and stress-tested a user-centric UI using Angular.js and JavaScript, streamlining robust MySQL data entry tasks to maximize operator efficiency and minimize training time.

Personal Projects

YouTube Content Creator

2015 - Present

- Long-form, documentary-style content that has amassed 25,000+ subscribers and 7,000,000+ views.
- Has developed strong video editing, image editing, topic research, and community management skills.
- Inquired toward and collaborated with partners through extensive networking and efficient discussion to ensure the accuracy and punctuality of final videos.

Webgame Port Contributor

2023 - Present

- Collaborated closely to port very popular Flash game to HTML and JavaScript to increase accessibility following Flash deprecation. Also helped develop an extension, leveraging REST APIs to build separate platform to host user-generated levels.
- Sole contributor of separate extension since 2025, which utilizes additional browser development tools and extensive time complexity analysis in a modification designed specifically for speedrunners.

Activities

Marching Band - University of Michigan

2022 - 2026

- 2x Student Leadership team member, collaborating with 400+ band members to perfect performances in front of 100,000+ people at every home football game.
- Exhibits preparedness and focus in order to achieve success within a fast-paced environment.
- Traveled domestically and internationally, including a European performance tour in Summer 2025.

Basketball/Hockey Band - University of Michigan

2023 - 2025, 2026 - Present

- Demonstrated versatility as a musician, learning music on multiple instruments and traveling domestically.

Skills

Languages: C, C++, C#, Python, JavaScript, TypeScript, HTML, CSS, SQL

Frameworks/Tools: Angular.js, React.js, Git, Linux/WSL

Coursework: Machine Learning, Operating Systems, Web Systems, Computer Security, Database Management

Awards

2x Michigan Marching Band scholarship Recipient

2024, 2025

- Awarded for outstanding leadership and exceptional contributions to the ensemble.

High School Valedictorian

2022
